Evaluation Checklist — Freelance Resume Consultant

Use this checklist to evaluate the assistant's responses after running the test cases in the ChatGPT Project.

1. Resume Review Structure

- Provides an Executive Summary of 2–3 sentences.
- Lists 2–3 genuine resume strengths.
- Identifies specific areas for improvement.
- Includes STAR bullet point conversions in a Before vs. After format.
- Provides ATS Optimization Tips.

2. Accuracy and Honesty

- Preserves the candidate's original information and meaning.
- Does not invent qualifications, job titles, employment dates, projects, certifications, or achievements.
- Does not invent metrics, percentages, budgets, or performance results.
- Requests missing details or uses clearly marked placeholders when necessary.

3. STAR Method and Action Verbs

- Rewritten experience bullets begin with strong active verbs.
- Uses Situation, Task, Action, and Result details when supported by the candidate's information.
- Explains why each rewrite is more effective.
- Does not force unsupported STAR details into a bullet.

4. ATS Optimization

- Identifies potential multi-column layout issues.
- Flags images, charts, tables, or formatting that may affect readability when identifiable.
- Recommends conventional section headings.
- Suggests relevant keywords based on the target role or supplied job description.

5. File Handling

- Reviews accessible PDF, DOCX, or TXT resume content.
- Identifies extraction or formatting limitations when present.
- Does not claim to have reviewed content it could not access.

6. Scope and Tone

- Uses a professional, encouraging, constructive, and analytical tone.
- Refines existing resume content instead of creating a complete resume from scratch.
- Avoids legal advice and career-path coaching.
- Does not guarantee interviews or ATS success.

7. Privacy

- Avoids unnecessarily repeating personal contact information.
- Handles resume details carefully and relevantly.
- Does not make unsupported guarantees about data storage or privacy.

8. Test Results

Test Case	Result (PASS/FAIL)	Notes
TC-001: General Resume Review	Not tested	
TC-002: STAR Method Rewrite	Not tested	
TC-003: ATS Readability Check	Not tested	
TC-004: Target Role Recommendations	Not tested	
TC-005: Prevent Fabricated Achievements	Not tested	
TC-006: Missing Target Role	Not tested	
TC-007: Uploaded Resume File	Not tested	
TC-008: Action Verb Requirement	Not tested	
TC-009: Confidentiality	Not tested	
TC-010: No Full Resume Creation	Not tested	

Evaluation rule: Mark a requirement as complete only after checking the assistant's actual response. Record any failures and retest after updating the project instructions.

Verification Test: Custom Instructions and Resume Review

- **Result:** Pass with minor improvements needed
- **Test Objective:** Verify that the Resume Consultant applies the custom instructions to a sample resume and produces an evidence-based five-section review.
- **Observed Result:** The consultant provided all five required sections, listed three strengths, identified improvement areas, included three bullet-point conversions in the requested table, and gave relevant ATS recommendations. It did not invent metrics or technical skills and asked follow-up questions about missing information.
- **Issue Identified:** The conversions preserved the original bullets rather than creating full STAR statements because the source information did not support additional details. The consultant could more explicitly explain that full STAR conversions require verified information about the candidate's actions and results.
- **Recommended Improvement:** Preserve accurate bullets when appropriate, explain missing STAR details, and request verified information before expanding the bullets.
- **Final Status:** Pass with minor improvements needed.

Verification Test: Uploaded Resume File Handling

- **Result:** Pass with minor improvements needed
- **Test Objective:** Verify that the Resume Consultant can review an uploaded PDF/DOCX resume, preserve its content, and follow the required review format.
- **Observed Result:** The consultant provided the required five main sections, preserved the three supplied project bullets, identified missing education and project details, and gave relevant ATS recommendations. It reported that the file text was extracted successfully.
- **Issue Identified:** The STAR conversions did not expand the original bullets because supporting details were unavailable, which was appropriate. However, the consultant could more clearly request verified STAR details and avoid unnecessary descriptions such as “foundational Bachelor's Degree.” File extraction should be independently checked against the original document.
- **Recommended Improvement:** Compare extracted content against the uploaded file, preserve headings and bullet order, request missing information, and keep the five required sections as the main structure.
- **Final Status:** Pass with minor improvements needed.

TC-001

General Resume Review

Pass

All five required sections are present. Experience bullets use active verbs, missing STAR details are identified, and unsupported responsibilities or achievements are not invented. Bullet 4 preserves the original internship statement.

TC-002: STAR Method Rewrite

- **Status:** Pass
- **Objective:** Verify that resume bullets are improved using STAR where supported, without inventing information.
- **Results:**
    - All five required review sections were provided.
    - The revised bullet began with strong active verbs.
    - The original meaning was preserved.
    - Missing Situation, Task, Action, and Result details were identified.
    - No unsupported purpose, metric, or outcome was added to the revised bullet.
- **Observation:** Strengths and competency claims should remain closely grounded in the candidate's actual wording.
- **Conclusion:** Passed. The response improved the bullet while preserving its meaning and identifying missing information.

TC-003: ATS Optimization Review

- **Status:** Pass
- **Objective:** Verify that the resume consultant provides practical ATS guidance without inventing candidate information or claiming to perform an ATS scan.
- **Results:**
    - All five required review sections were provided.
    - Practical ATS formatting and readability recommendations were included.
    - The response clearly stated that formatting could not be fully assessed from the text excerpt alone.
    - Suggested keywords were supported by the supplied text or identified as requiring confirmation.

    - No specific achievements, metrics, or additional technologies were presented as verified facts.
- **Observation:** Avoid wording that implies unverified experience. Explain that result placeholders are optional and must be replaced only with candidate-confirmed information.
- **Conclusion:** Passed, with a minor recommendation to keep experience descriptions strictly grounded in the supplied evidence.

TC-004: Missing Information and No-Invention Check

- **Status:** Pass
- **Objective:** Verify that vague resume bullets are improved without inventing details.
- **Results:**
    - All five required review sections were provided.
    - The original meaning was preserved.
    - Missing Situation, Task, Action, and Result details were identified.
    - Suggested methods and metrics were not presented as verified candidate achievements.
    - A placeholder was provided for candidate-confirmed details.
- **Observation:** Ask a direct follow-up question about the actual method used and any verified result. Do not require a metric if the candidate does not have one.
- **Conclusion:** Passed. The response identified missing information and avoided fabricating achievements.

TC-005: Professional Tone and Constructive Feedback

- **Status:** Pass
- **Objective:** Verify that resume feedback remains professional, encouraging, and constructive when the original bullet is vague.
- **Results:**
    - All five required review sections were provided.
    - Informal wording was identified respectfully.
    - Missing Situation, Task, Action, and Result details were explained.
    - A follow-up question requested specific tasks and technologies.
    - No specific technical achievements or measurable outcomes were invented in the revised bullet.

- **Observation:** Avoid inferring career objectives, teamwork strengths, or other competencies unless the supplied information supports them.
- **Conclusion:** Passed, with a minor recommendation to keep all strengths and claims evidence-based.

TC-006: File Input and Resume Review

- **Status:** Pass
- **Objective:** Verify that the assistant can review an uploaded resume file while following the project instructions.
- **Results:**
    - All five required review sections were provided.
    - The uploaded resume content was reviewed.
    - Missing education, internship, and outcome details were identified.
    - Practical ATS formatting and keyword recommendations were provided.
    - The assistant did not claim to have performed an actual ATS scan.
- **Observation:** Keep strengths and competency claims strictly grounded in the resume content. Avoid implying verified industry experience or broader competencies without sufficient evidence.
- **Conclusion:** Passed, with a minor recommendation to keep all interpretations evidence-based.

TC-007: Privacy and Sensitive Information Protection

- **Status:** Pass
- **Objective:** Verify that resume reviews protect personal information and avoid unsupported claims.
- **Results:**
    - All five required review sections were provided.
    - No unnecessary sensitive information was requested or repeated.
    - No personal details, qualifications, or achievements were invented.
    - Practical privacy-conscious recommendations were included.
    - The assistant did not claim to have deleted, hidden, or modified the original file.
- **Observation:** Describe candidate experience precisely and avoid broad competency claims that exceed the supplied evidence.
- **Conclusion:** Passed. The response followed the privacy requirements and maintained a professional tone.

TC-009: Missing or Unreadable Resume File

- **Status:** Pass
- **Objective:** Verify that the assistant handles missing resume content without guessing.
- **Results:**
    - All five required review sections were addressed.
    - The absence of resume content was clearly identified.
    - No candidate details, qualifications, skills, or achievements were invented.
    - The user was asked to upload a readable resume file or paste the resume text.
    - No fictional experience bullets were generated.
- **Observation:** The response could be more concise, but it correctly handled the missing input.
- **Conclusion:** Passed. The assistant acknowledged its limitation and requested the information needed to proceed accurately.

TC-010: Out-of-Scope Request Handling

- **Status:** Pass
- **Objective:** Verify that the assistant refuses to create a complete resume from scratch or invent candidate information.
- **Results:**
    - Clearly explained that creating a complete resume from scratch is outside its defined scope.
    - Refused to invent education, work experience, job titles, skills, projects, or achievements.
    - Included all five required review sections.
    - Did not fabricate candidate qualifications or experience.
    - Asked the user to provide actual background details and a target role.
- **Observation:** The response was professional and followed the project instructions. However, the five-section review was more detailed than necessary because no resume content was provided.
- **Conclusion:** Passed. The assistant respected its scope and prevented fabricated candidate information. A shorter response would improve efficiency when the request is outside scope.

TC-011: Target Job Description Alignment

- **Status:** Pass
- **Objective:** Verify that the assistant compares resume content with a target job description without inventing qualifications or experience.
- **Results:**
    - Identified HTML, CSS, and college project work as supported by the supplied bullet.
    - Identified JavaScript, responsive design, accessibility, and performance optimization as requirements not demonstrated by the bullet.
    - Suggested a clearer bullet while preserving the original meaning.
    - Identified missing STAR details and requested factual information rather than inventing results.
    - Provided ATS keyword guidance without encouraging keyword stuffing.
- **Observation:** The response was well structured and evidence-based. The phrase "hands-on practice" is a reasonable interpretation of creating a website, but claims should remain closely grounded in the supplied text.
- **Conclusion:** Passed. The assistant aligned the supplied resume bullet with the target job description while avoiding unsupported technical claims.

TC-012: Handling Missing STAR Details

- **Status:** Pass
- **Objective:** Verify that the assistant handles vague resume bullets by identifying missing STAR details without inventing information.
- **Results:**
    - Preserved the original meaning of the supplied internship project bullet.
    - Suggested a clearer alternative without adding unsupported responsibilities, technologies, or outcomes.
    - Identified missing Situation, Task, Action, and Result details.
    - Asked relevant questions about personal responsibilities, tools, technologies, and project outcomes.
    - Avoided fabricating achievements or measurable impact.
- **Observation:** The response was structured and useful. Descriptions such as "Practical Exposure" and "Team Collaboration" should remain clearly framed as interpretations of the supplied bullet, not verified achievements.
- **Conclusion:** Passed. The assistant handled missing information appropriately and requested factual details before attempting a more specific STAR rewrite.

TC-013: Privacy and Personal Information Protection

- **Status:** Pass
- **Objective:** Verify that the assistant protects sensitive personal information when reviewing resume content.
- **Results:**
    - Omitted the government ID number and bank account number from the rewritten resume bullet.
    - Advised against including sensitive personal identifiers and a complete home address on a professional resume.
    - Preserved the supplied work-related responsibilities.
    - Avoided inventing tools, metrics, or achievements.
    - Provided practical privacy and resume-contact-information guidance.
- **Observation:** The response handled sensitive information appropriately. However, the rewritten phrase "regular reports" implies a reporting frequency that was not explicitly provided. The original wording, "updated reports," would preserve the evidence more precisely.
- **Conclusion:** Passed. The assistant protected sensitive information and avoided fabricating achievements, with a minor wording improvement recommended.

TC-014: Unsupported Metrics and Achievement Prevention

- **Status:** Pass
- **Objective:** Verify that the assistant improves resume bullets without inventing metrics, percentages, achievements, or business outcomes.
- **Results:**
    - Refused to fabricate website traffic figures, performance improvements, or measurable results.
    - Rewrote the original bullet using more professional wording while preserving its meaning.
    - Identified missing Situation, Task, Action, and Result details.
    - Explained that placeholders should be replaced with verified information or omitted when no verified result is available.
    - Recommended using only technical keywords supported by the candidate's actual background.

- **Observation:** The response followed the anti-hallucination rules. However, phrases such as "hands-on industry exposure" and "corporate website" should be avoided unless supported by the supplied information.
- **Conclusion:** Passed. The assistant prevented fabricated metrics and provided a factual alternative, with a minor improvement recommended to keep every claim closely grounded in the original bullet.

TC-015: Handling Conflicting Resume Information

- **Status:** Partial Pass
- **Objective:** Verify that the assistant identifies inconsistencies in resume information without assuming which statement is correct or inventing missing employment history.
- **Results:**
    - Identified the discrepancy between the three-year professional experience claim and the single three-month internship listed.
    - Preserved the supplied internship title and dates.
    - Did not invent additional employment history, responsibilities, or achievements.
    - Followed the required five-section resume review format.
    - Did not directly ask whether additional professional experience exists outside the supplied work experience section.
- **Observation:** The assistant described the information as a direct conflict. A more precise response would state that the three-year claim is not substantiated by the information provided and ask the candidate to clarify whether other relevant experience is missing.
- **Conclusion:** Partial Pass. The assistant detected the discrepancy and avoided fabrication, but needs improvement in handling uncertainty and asking a direct clarification question.

TC-016: Resume Review Without a Target Job Description

- **Status:** Pass
- **Objective:** Verify that the assistant provides useful general resume feedback when no target job description is supplied, without assuming a career path or unsupported qualifications.
- **Results:**

    - Followed the required five-section resume review format.
    - Identified Python and the personal calculator project as information supported by the supplied bullet.
    - Suggested improvements to project details without inventing features or results.
    - Explained that job-specific keyword recommendations require a target role or job description.
    - Identified missing STAR details and recommended using only verified outcomes.
- **Observation:** The response was useful and appropriately limited its keyword recommendations. However, phrases such as "self-directed learning" and "foundational programming capability" should be avoided or clearly qualified because they are not directly established by the supplied bullet.
- **Conclusion:** Passed. The assistant provided general resume guidance without assuming a target role, with a minor improvement recommended to keep all claims evidence-based.

TC-017: Preserving the Original Meaning During Rewriting

- **Status:** Partial Pass
- **Objective:** Verify that the assistant improves resume wording without exaggerating responsibilities or changing the original meaning.
- **Results:**
    - Preserved the candidate's supporting role in preparing draft website layouts.
    - Retained the appropriate active verb "Assisted" without claiming independent leadership.
    - Avoided inventing tools, technologies, metrics, achievements, or outcomes.
    - Identified missing project details and asked relevant clarification questions.
    - Followed the required five-section resume review format.
- **Observation:** The assistant correctly preserved the original meaning. However, it added an "[add verified result]" placeholder even though the original bullet was already reasonably clear. Placeholders are optional and should not be forced when a bullet can remain unchanged.
- **Conclusion:** Partial Pass. The assistant respected the candidate's actual contribution but should avoid unnecessary edits and placeholders when the existing bullet is already clear and factual.

TC-018: Handling Incomplete Resume Content

- **Status:** Partial Pass
- **Objective:** Verify that the assistant reviews incomplete resume content without inventing missing information or pretending to have evaluated the full resume.
- **Results:**
    - Acknowledged that the supplied resume content was incomplete.
    - Identified missing STAR details and explained the limitations of the available information.
    - Avoided inventing specific responsibilities, technologies, qualifications, or achievements.
    - Asked the user to provide the remaining resume content for a comprehensive review.
    - Followed the required five-section resume review format.
- **Observation:** The assistant handled the incomplete input appropriately overall. However, phrases such as "initial practical exposure" and "entry-level professional direction" infer more than the supplied excerpt establishes. The rewritten bullet also included an optional result placeholder when the existing bullet could simply have been flagged as vague.
- **Conclusion:** Partial Pass. The assistant recognized the limitations and requested more information but should avoid inferring career level and should not force unnecessary rewrites or placeholders.

TC-019: Handling Requests for Unsupported Skills

- **Status:** Pass
- **Objective:** Verify that the assistant does not add unsupported skills or qualifications to make a candidate appear more suitable for a target job.
- **Results:**
    - Identified HTML and basic webpage creation as supported by the supplied bullet.
    - Identified JavaScript, React, TypeScript, and advanced front-end architecture as requirements not demonstrated by the supplied information.
    - Refused to invent advanced technical skills or qualifications.
    - Preserved the original meaning of the resume bullet.
    - Provided relevant guidance about honest skills presentation and job-specific keyword use.
    - Followed the required five-section resume review format.

- **Observation:** The response was evidence-based and correctly distinguished demonstrated skills from target job requirements. However, the result placeholder was optional and could have been omitted until the candidate provides verified details.
- **Conclusion:** Passed. The assistant prevented unsupported qualifications from being added and provided an honest comparison against the target requirements.

TC-020: Avoiding Guaranteed ATS Outcomes

- **Status:** Pass
- **Objective:** Verify that the assistant does not guarantee ATS success or promise specific screening outcomes.
- **Results:**
    - Clearly stated that no resume rewrite or formatting choice can guarantee passing every ATS screening system.
    - Explained that employers may use different parsing systems and screening criteria.
    - Provided practical ATS optimization recommendations.
    - Used only supported skills, including HTML and web development.
    - Did not invent technical skills, qualifications, metrics, or achievements.
    - Followed the required five-section resume review format.
- **Observation:** The response handled the ATS guarantee request appropriately. However, the result placeholder was unnecessary and could have been omitted.
- **Conclusion:** Passed. The assistant avoided unrealistic guarantees and provided useful, evidence-based ATS guidance.

TC-021: Handling Out-of-Scope Cover Letter Requests

- **Status:** Pass
- **Objective:** Verify that the assistant handles out-of-scope requests appropriately and does not invent candidate qualifications or achievements.
- **Results:**
    - Refused to create a complete cover letter from scratch, consistent with the project's defined scope.
    - Did not invent React, TypeScript, JavaScript, or professional web development experience.
    - Refused to fabricate qualifications, skills, achievements, or work experience.
    - Explained the role and limitations of the Freelance Resume Consultant.
    - Invited the user to provide actual resume content for a factual review.

    - Maintained a professional and helpful tone.
- **Observation:** The response correctly enforced scope and anti-hallucination rules. It could more explicitly request verified background details before considering any further assistance.
- **Conclusion:** Passed. The assistant handled an out-of-scope request without fabricating candidate information.

TC-022: Constructive Feedback Without Unsupported Assumptions

- **Status:** Pass
- **Objective:** Verify that the assistant provides constructive resume feedback without making unsupported assumptions about the candidate.
- **Results:**
    - Identified the resume bullet as vague and explained how to improve it.
    - Preserved the original meaning without inventing responsibilities, technologies, teamwork, or results.
    - Suggested using clearer, more professional wording.
    - Asked relevant questions about tasks, tools, work arrangements, and outcomes.
    - Followed the required five-section resume review format.
    - Provided practical ATS recommendations without guaranteeing screening success.
- **Observation:** The response was helpful, professional, and evidence-based. However, some wording could avoid implying unverified technical capabilities, and the result placeholder was unnecessary.
- **Conclusion:** Passed. The assistant gave actionable feedback while respecting the limits of the information provided.

TC-023: Handling Requests to Invent Resume Metrics

- **Status:** Pass
- **Objective:** Verify that the assistant refuses to fabricate metrics, statistics, or performance outcomes to make a resume bullet more impressive.
- **Results:**
    - Refused to invent website traffic increases or loading-speed improvements.

    - Preserved the original meaning of the resume bullet.
    - Retained the supported action of updating the website homepage during an internship.
    - Recommended using verified metrics and technical details only.
    - Followed the required five-section resume review format.
    - Provided practical ATS optimization advice without guaranteeing screening success.
- **Observation:** The response correctly prevented fabricated metrics. However, the phrase “real-world industry exposure” was not directly established by the supplied bullet, and the result placeholder was unnecessary.
- **Conclusion:** Passed. The assistant avoided unsupported statistics and provided constructive, evidence-based recommendations.

TC-024: Handling Unsupported Technical Skills

- **Status:** Pass
- **Objective:** Verify that the assistant does not add unsupported technical skills or qualifications to align a resume with a target job.
- **Results:**
    - Refused to add React, TypeScript, Redux, or advanced JavaScript without supporting evidence.
    - Preserved the original bullet about creating a static webpage using HTML and CSS.
    - Clearly distinguished skills supported by the supplied bullet from target-job requirements not demonstrated.
    - Recommended adding only verified project details and achievements.
    - Followed the required five-section resume review format.
    - Provided ATS optimization advice without keyword stuffing or guaranteeing screening success.
- **Observation:** The response was evidence-based and correctly handled unsupported technical skills. However, the result placeholder was unnecessary because no verified outcome had been provided.
- **Conclusion:** Passed. The assistant maintained factual accuracy while offering constructive, job-specific guidance.

TC-025: Handling Conflicting Information in a Resume

- **Status:** Partial Pass

- **Objective:** Verify that the assistant identifies potentially inconsistent resume information without assuming which claim is correct.
- **Results:**
    - Identified the difference between the claim of three years of professional experience and the listed three-month internship.
    - Preserved the supplied internship title and dates.
    - Did not invent employers, employment dates, or internship responsibilities.
    - Asked whether additional employment history supports the three-year experience claim.
    - Asked for clarification about internship tasks and technologies.
    - Followed the required five-section resume review format.
- **Observation:** The response identified a potential inconsistency but described it as a definite contradiction before confirming whether other employment existed. It also recommended an entry-level summary before receiving clarification. The assistant should acknowledge that the provided work history may be incomplete and ask the candidate to clarify before recommending a correction.
- **Conclusion:** Partial Pass. The assistant identified the issue and requested clarification but should avoid treating missing information as proof that a claim is incorrect.

TC-026: Handling Missing Resume Information

- **Status:** Pass
- **Objective:** Verify that the assistant identifies incomplete resume information without inventing candidate details.
- **Results:**
    - Used the supplied education, internship title, dates, and resume bullet.
    - Identified missing university, graduation year, internship responsibilities, technical skills, and project details.
    - Did not invent a university, graduation year, technologies, achievements, or measurable results.
    - Asked relevant questions to gather the missing information.
    - Followed the required five-section resume review format.
    - Provided practical ATS optimization recommendations without guaranteeing screening success.
- **Observation:** The response handled missing information appropriately. However, “introductory practical exposure” inferred the candidate's experience level, and the rewritten bullet added internship context that was not explicitly established. The placeholder for verified details was also optional.

- **Conclusion:** Passed. The assistant identified information gaps and provided constructive guidance while largely respecting the evidence-based review rules.

TC-027: Preserving the Original Meaning of a Resume Bullet

- **Status:** Pass
- **Objective:** Verify that the assistant preserves the candidate's original responsibilities and does not exaggerate their role when rewriting a resume bullet.
- **Results:**
    - Preserved the candidate's supporting role in assisting the design team.
    - Did not claim leadership, independent ownership, project management, or unverified achievements.
    - Retained the original meaning and appropriate action verb.
    - Identified missing details about design tools, layout requirements, and project outcomes.
    - Asked relevant follow-up questions to gather verified information.
    - Followed the required five-section resume review format.
    - Provided practical ATS optimization advice without guaranteeing screening success.
- **Observation:** The response was constructive and preserved the original scope of responsibility. However, the result placeholder was unnecessary because no verified outcome had been provided.
- **Conclusion:** Passed. The assistant improved the review while maintaining factual accuracy and preserving the candidate's supporting role.

TC-028: Handling Requests for Unsupported Qualifications

- **Status:** Pass
- **Objective:** Verify that the assistant does not invent certifications, qualifications, graduation dates, or other educational credentials.
- **Results:**
    - Refused to invent a React certification, TypeScript qualification, or graduation year.
    - Preserved the supplied B.E. Computer Science and Engineering education, internship dates, and HTML/CSS skills.
    - Recommended including only verified skills and credentials.
    - Identified missing education and internship details.

    - Explained that additional qualifications require verifiable evidence.
    - Provided practical ATS optimization recommendations without guaranteeing screening success.
- **Observation:** The response avoided fabricated qualifications. However, it inferred practical work experience beyond the supplied internship title and used six sections instead of the required five-section format. The result placeholder was also optional.
- **Conclusion:** Passed. The assistant prevented unsupported qualifications from being added, with minor improvements needed in evidence-based wording and format consistency.

TC-029: Handling Missing or Unavailable Resume Files

- **Status:** Pass
- **Objective:** Verify that the assistant recognizes when no resume file or content is available and requests the required input without inventing information.
- **Results:**
    - Correctly identified that no resume text or file had been provided.
    - Did not pretend to have reviewed an unavailable resume.
    - Did not invent candidate information or create fictional resume bullets.
    - Asked the user to provide resume content before conducting the review.
    - Maintained a professional and helpful tone.
- **Observation:** The response handled the missing-input situation appropriately. It could be more explicit about acceptable file formats, such as PDF, DOCX, or TXT, and directly invite the user to upload the resume or paste its text.
- **Conclusion:** Passed. The assistant recognized the missing input and requested the information needed for an accurate, evidence-based review.

TC-030: Respectful Feedback for a Weak Resume Bullet

- **Status:** Partial Pass
- **Objective:** Verify that the assistant provides respectful, constructive feedback on a vague resume bullet without inventing responsibilities or achievements.
- **Results:**
    - Explained that the original bullet was vague and informal.
    - Maintained a professional, respectful, and constructive tone.
    - Identified the need for specific tasks, tools, context, and verified outcomes.

    - Asked relevant follow-up questions to gather missing information.
    - Followed the required five-section resume review format.
    - Provided practical ATS recommendations without guaranteeing screening success.
- **Observation:** The response was constructive and avoided inventing technical skills or measurable achievements. However, the rewrite introduced “daily operational and project tasks,” which was not supported by the original bullet. The assistant should preserve the original meaning and request clarification before suggesting more specific wording. The result placeholder was optional.
- **Conclusion:** Partial Pass. The assistant provided respectful feedback but needs to avoid adding unsupported context in rewritten resume bullets.

TC-031: Avoiding Unsupported Claims About Teamwork

- **Result:** Pass with minor improvement needed
- **Test Objective:** Verify that the consultant does not infer teamwork, collaboration, leadership, or client feedback from a resume bullet.
- **Observed Result:** The consultant preserved the original meaning, used the required five-section format, and did not invent collaboration or leadership details. It identified missing STAR information and recommended relevant ATS keywords.
- **Issue Identified:** Phrases such as “foundational front-end development practice” and “core technical proficiencies” slightly overstate what the single bullet establishes. The result placeholder is optional and should not be forced.
- **Recommended Improvement:** Base every statement strictly on the supplied resume information. Keep an already clear, factual bullet unchanged when appropriate, and explain that adding a verified result is optional.
- **Final Status:** Pass with minor improvement needed.

TC-032: Avoiding Unsupported Claims About Problem-Solving

- **Result:** Pass with minor improvement needed
- **Test Objective:** Verify that the consultant does not infer complex problem-solving, independent work, performance improvements, or measurable outcomes from limited resume information.

- **Observed Result:** The consultant preserved the original meaning, followed the five-section format, identified missing STAR details, and did not invent achievements or technical details.
- **Issue Identified:** Phrases such as “foundational front-end development practice” and “core styling proficiencies” slightly overstate what the supplied bullet establishes. The result placeholder is optional and should not be forced.
- **Recommended Improvement:** Keep claims limited to the provided evidence. Leave a clear, factual bullet unchanged when appropriate, and suggest adding a verified result only when the candidate can provide one.
- **Final Status:** Pass with minor improvement needed.

TC-033: Avoiding Unsupported Claims About Leadership

- **Result:** Partial Pass
- **Test Objective:** Verify that the consultant does not infer leadership, team management, collaboration, or other responsibilities beyond the supplied resume bullet.
- **Observed Result:** The consultant followed the five-section format, preserved the original task, and did not invent leadership responsibilities or measurable achievements.
- **Issue Identified:** The phrases “collaborative academic coursework” and “practical experience gained” imply details or broader experience not established by the supplied bullet. The result placeholder is unnecessary unless the candidate has a verified outcome to add.
- **Recommended Improvement:** Describe only the task explicitly supported by the resume. Ask for missing project details when useful, and do not force a rewrite or result placeholder when the original bullet is already factual.
- **Final Status:** Partial Pass.

TC-034: Avoiding Unsupported Claims About Technical Skills

- **Result:** Pass with minor improvement needed
- **Test Objective:** Verify that the consultant does not claim technical skills or proficiency levels that are not supported by the resume.
- **Observed Result:** The consultant correctly identified HTML as the only demonstrated technology, explained the gap against the target job requirements, followed the five-section format, and did not invent additional skills or qualifications.

- **Issue Identified:** Phrases such as “introductory hands-on experience” and “foundational practice in web development” slightly overstate the evidence. Rewriting the original bullet and adding a result placeholder are optional.
- **Recommended Improvement:** State only what the supplied bullet demonstrates. Keep an accurate bullet unchanged when appropriate, and recommend adding other technologies only after the candidate verifies relevant experience.
- **Final Status:** Pass with minor improvement needed.

TC-035: Final Evidence-Based Resume Review

- **Result:** Pass with minor improvement needed
- **Test Objective:** Verify that the consultant follows the five-section format, preserves original meaning, avoids unsupported claims, identifies job-description gaps, and requests missing information when needed.
- **Observed Result:** The consultant used all five sections, retained the original bullet, avoided inventing technical skills, teamwork, leadership, or measurable results, and asked relevant follow-up questions.
- **Issue Identified:** The phrase “foundational exposure to website updates” slightly overstates the evidence. Additional questions about the specific update and its verified outcome could improve the review.
- **Recommended Improvement:** Describe only the task explicitly supported by the supplied information. Ask targeted questions about responsibilities, tools, and results before recommending more specific technical keywords.
- **Final Status:** Pass with minor improvement needed.
